

The Water We Drink

J.E.S.T.C.

Public Water Supply ID: LA1033132

We are pleased to present to you the Annual Water Quality Report for the year 2016. This report is designed to inform you about the quality of your water and services we deliver to you every day (Este informe contiene información muy importante sobre su agua potable. Tradúzcalo o hable con alguien que lo entienda bien). Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Our water source(s) are listed below:

Source Name	Source Water Type
J.E.S.T.C. WELL 002	Ground Water

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity. Contaminants that may be present in source water include:

Microbial Contaminants - such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.

Inorganic Contaminants - such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming.

Pesticides and Herbicides - which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.

Organic Chemical Contaminants - including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

Radioactive Contaminants - which can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration regulations establish limits for contaminants in bottled water which must provide the same protection for public health. We want our valued customers to be informed about their water utility. If you have any questions about this report, want to attend any scheduled meetings, or simply want to learn more about your drinking water, please contact RICHARD PERRY at 225-658-7204.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. J.E.S.T.C. is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

The Louisiana Department of Health and Hospitals - Office of Public Health routinely monitors for constituents in your drinking water according to Federal and State laws. The tables that follow show the results of our monitoring during the period of January 1st to December 31st, 2016. Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk.

In the tables below, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

Parts per million (ppm) or Milligrams per liter (mg/L) – one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (ug/L) – one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) – picocuries per liter is a measure of the radioactivity in water.

Treatment Technique (TT) – an enforceable procedure or level of technological performance which public water systems must follow to ensure control of a contaminant.

Action level (AL) – the concentration of a contaminant that, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum contaminant level (MCL) – the “Maximum Allowed” MCL is the highest level of a contaminant that is allowed in drinking water. MCL's are set as close to the MCLG's as feasible using the best available treatment technology.

Maximum contaminant level goal (MCLG) – the “Goal” is the level of a contaminant in drinking water below which there is no known or expected risk to human health. MCLG's allow for a margin of safety.

Maximum residual disinfectant level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum residual disinfectant level goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Level 1 assessment – A study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment – A very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

During the period covered by this report we had the below noted violations.

Compliance Period	Analyte	Type
4/1/2016 - 4/30/2016	E. COLI	MONITORING, ROUTINE, MAJOR (RTCR)
4/1/2016 - 4/30/2016	CHLORINE	MONITORING, ROUTINE (DBP), MAJOR
4/1/2016 - 4/30/2016	PUBLIC NOTICE	PUBLIC NOTICE RULE LINKED TO VIOLATION
4/1/2016 - 4/30/2016	PUBLIC NOTICE	PUBLIC NOTICE RULE LINKED TO VIOLATION
7/1/2016	CONSUMER CONFIDENCE RULE	CCR REPORT
10/1/2016	CONSUMER CONFIDENCE RULE	CCR ADEQUACY/AVAILABILITY/CONTENT

Our water system tested a minimum of 1 samples per month in accordance with the Total Coliform Rule for microbiological contaminants. During the monitoring period covered by this report, we had the following noted detections for microbiological contaminants:

Microbiological	Result	MCL	MCLG	Typical Source
No Detected Results were Found in the Calendar Year of 2016				

In the tables below, we have shown the regulated contaminants that were detected. Chemical Sampling of our drinking water may not be required on an annual basis; therefore, information provided in this table refers back to the latest year of chemical sampling results.

Regulated Contaminants	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
BARIUM	9/6/2016	0.006	0.006	ppm	2	2	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
FLUORIDE	9/6/2016	0.17	0.17	ppm	4	4	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories

Radionuclides	Collection Date	Highest Value	Range	Unit	MCL	MCLG	Typical Source
No Detected Results were Found in the Calendar Year of 2016							

Lead and Copper	Date	90 TH Percentile	Range	Unit	AL	Sites Over AL	Typical Source
COPPER, FREE	2013 - 2015	0.1	0.1	ppm	1.3	0	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
LEAD	2013 - 2015	1	1	ppb	15	0	Corrosion of household plumbing systems; Erosion of natural deposits

Disinfection Byproducts	Sample Point	Period	Highest LRAA	Range	Unit	MCL	MCLG	Typical Source
TOTAL HALOACETIC ACIDS (HAA5)	JESTC EAST END	2016	6	6 - 6	ppb	60	0	By-product of drinking water disinfection
TOTAL HALOACETIC ACIDS (HAA5)	JESTC WEST END	2016	4	4.2 - 4.2	ppb	60	0	By-product of drinking water disinfection
TTHM	JESTC EAST END	2016	48	47.6 - 47.6	ppb	80	0	By-product of drinking water chlorination
TTHM	JESTC WEST END	2016	29	28.8 - 28.8	ppb	80	0	By-product of drinking water chlorination

Unresolved significant deficiencies that were identified during a survey done on the water system are shown below.

Date Identified	Facility	Code	Activity	Due Date	Description
06/30/2014	DISTRIBUTION SYSTEM	CC17			LAC 51:XII.344 - LSPC - Protection of Water Supply/Containment Practices
06/30/2014	STORAGE GROUND TANK	ST14			LAC 51:XII.337.C - Protection from Birds, Insects, and Other Contaminants

Secondary Contaminants	Collection Date	Highest Value	Range	Unit	SMCL
ALUMINUM	8/12/2013	0.04	0.04	MG/L	0.05
IRON	9/6/2016	0.035	0.035	MG/L	0.3
MANGANESE	9/6/2016	0.0081	0.0081	MG/L	0.05
PH	9/6/2016	9.1	9.1	SU	8.5

SULFATE	8/12/2013	9	9	MG/L	250
---------	-----------	---	---	------	-----

+++++Environmental Protection Agency Required Health Effects Language+++++

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

There are no additional required health effects notices.

There are no additional required health effects violation notices.

+++++

Thank you for allowing us to continue providing your family with clean, quality water this year. In order to maintain a safe and dependable water supply we sometimes need to make improvements that will benefit all of our customers.

We at the J.E.S.T.C. work around the clock to provide top quality drinking water to every tap. We ask that all our customers help us protect and conserve our water sources, which are the heart of our community, our way of life, and our children's future. Please call our office if you have questions.

PUBLIC NOTICE

J.E.S.T.C.
LA1033132

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. Please be aware of the following violation(s):

Bacteriological Monitoring Violation(s): During the following monitoring period(s)

1. *Apr 1, 2016 - Apr 30, 2016*

J.E.S.T.C. did not monitor or test or did not complete all monitoring or testing for coliform bacteria as set forth in the State and Federal Primary Drinking Water Regulations [Part XII of the Louisiana State Sanitary Code (LAC 51:XII)]. Therefore, we cannot be sure of the quality of your drinking water during that time.

Chlorine Residual Monitoring Violation(s): We are required to monitor your drinking water for chlorine residual at our point of collection taps at the same time bacteriological samples are collected. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the following monitoring period(s)

1. *Apr 1, 2016 - Apr 30, 2016*

J.E.S.T.C. did not monitor for chlorine residual at the same time bacteriological samples were collected, and therefore we cannot be sure of the quality of your drinking water during that time.

Disinfection Byproducts Monitoring Violation(s): We are required to monitor your drinking water for disinfection byproducts (total trihalomethanes [TTHM] and haloacetic acids-five [HAA5]). Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the following monitoring period(s)

1. *Jul 1, 2010 - Sep 30, 2011*
2. *Jan 1, 2013 - Dec 31, 2013*
3. *Jan 1, 2015 - Dec 31, 2015*

J.E.S.T.C. did not monitor, did not complete all monitoring, or did not report the results for total trihalomethanes (TTHMs) and haloacetic acids-five (HAA5), and therefore we cannot be sure of the quality of your drinking water during that time.

Lead & Copper Monitoring Violation(s): During the following monitoring period(s)

1. *Jan 1, 2011 - Jun 30, 2011*

J.E.S.T.C. did not complete all required monitoring for lead and copper, and therefore, cannot be sure of the quality of our drinking water during that time.

This is not an emergency. There is nothing you need to do at this time. As our customer, you have the right to know what happened and what is being done to correct the situation. Necessary action has been taken to prevent these violations from recurring.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

If you have questions, please contact our office at 225-658-2618
